

SENZEMO Analitycs

V1

SENZEMO Analytics is an IoT platform developed by Senszemo. It is offered as end to end solution meaning Senszemo takes care of server management for devices. The purpose of the platform is for user to check the data and metadata of the sensors connected. The platform allows us to create API keys to push sensor data forward to any desired IoT platform.

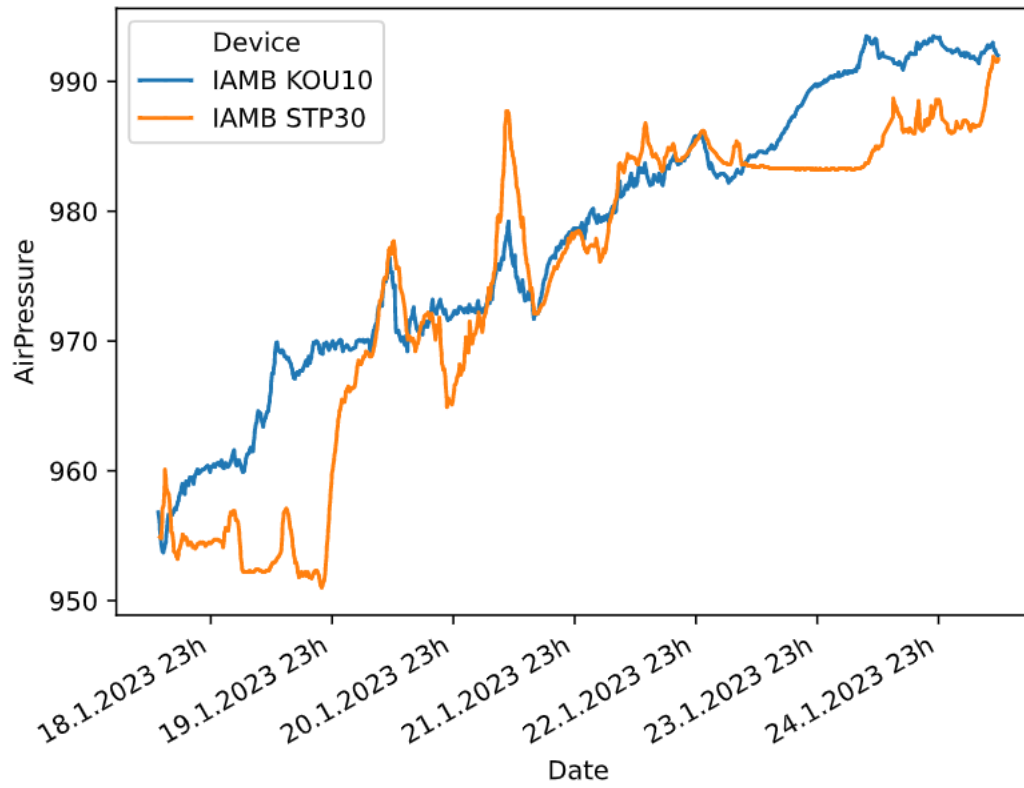

Description	Device ID	EUI	Organisation	Device Type	Status
IAMB STP30	stp30-002	0004A30B012C2BA2	IAMB	STP30	●
IAMB KOU10	kou10-001	0004A30B012C061B	IAMB	STP30	●

User is able to check data at a certain time period and create graphs.

With the metadata also available user can predict sensor lifetime (via checking signal strengths, spreading factor level and battery level).
